Subject: Manifest Requirements for Special Waste Transported Out-of-State

Gentlemen:

This letter has been initiated in an attempt to clarify some questions among the Special/Hazardous Waste Generating facilities regarding my June 15, 1982 letter.

As you are aware, effective June 15, 1982, storage, treatment and disposal facilities outside Illinois receiving waste generated in Illinois, shall no longer be required to obtain supplemental special waste stream authorization for any special waste -- hazardous or non-hazardous. However, a State of Illinois special waste hauling manifest must be completed to accompany all special waste transported out-of-state. On any such out-of-state manifests, the authorization number (spaces 8 through 13) must be left blank; all other portions of the manifest, including Illinois EPA generator and site codes, must be accurately completed. Furthermore, established distribution/record maintenance of manifest copies must be followed.

Special waste transported to an Illinois facility must still designate a valid, current waste stream (authorization) number (spaces 8 through 13).

Incomplete manifests received by this Agency for waste shipped to either in-state or out-of-state facilities will be forwarded to this Division's Compliance Assurance Unit for follow-up.

Should you have any questions concerning the contents of this letter, please contact Steve Colantino at 217/785-2361.

Sincerely,

Robert G. Kuykendall
wcc

Robert G. Kuykendall
Manager
Division of Land Pollution Control
